

Compactors

IHC - Fixed

IHC R - Rotating

IHC and IHC R compactors

Indeco IHC compactors combine high compaction with fast turnaround times. They are a very efficient replacement both for traditional risky and tiring manual equipment and for self-propelled rollers, which are at great risk of rollover during slope applications.

Compaction is achieved by applying both the dynamic force of a hydraulically-driven vibration system and the static weight of the carrier boom to the thick steel baseplate of the compactor.

Of course, the dynamic forces have to be powerful enough to vibrate the steel baseplate. To enable this to happen, Indeco compactors (mounted straight onto the carrier boom) are hydraulically driven with an oil-bath bearing system, which gives a balanced design of compaction force and vibration speed, so as to achieve the depth penetration needed to reduce air voids and move more material faster. Indeco's fixed or rotating IHC hydraulic compactors offer superior efficiency and versatility compared with other products on the market. Being fitted with the same mounting bracket as other Indeco hydraulic equipment makes it easy to switch from one tool to another at the jobsite.

Using just the carrier's hydraulic circuit, they are ideal for compacting backfill for trenches, as well as embankments or other steep slope applications, around foundations or close to other obstacles.

IHC compactors are also perfect for working on grainy, cohesive and semi-cohesive soils with optional adapters on the vibratory plate turning them into highly efficient, pile-driving tools. Indeco's rotating compaction plate, the IHC R, makes it much easier to position the excavator at the right angle to the working surface, especially for jobs in narrow pipe trenches and confined areas, where the compaction plate needs to reach into difficult corners or skirt round manholes and other obstacles.

Robust, versatile and highly productive, IHC compactors have a number of special features created by the technology researchers at Indeco.

Features of Indeco compactors

The system uses oil-bath bearings **|1|**, ensuring maximum reliability, low maintenance costs and high performance, even on the toughest of jobs.

The rubber shock-absorber system **|2|** is designed to direct the whole force down into the material to be compacted, thus isolating vibrations from the carrier and the operator.

The thick chassis and baseplates **|3|** are made from extra-strength steel alloys which means no flexing or other buckling that could affect performance.

The hydraulic system **|4|** balances force and speed to ensure that the eccentric weights can achieve depth penetration and reduce air voids.

The compactor has been specially designed **|5|** to work up close to trench walls, foundations, guard rails and other obstacles, along the whole width and length of the job.

The pressure- and flow-control valve **|6|** provides safer, quicker installation, ensuring that incorrect set-ups cannot affect the long-term reliability of the compactor.

The hydraulic connections **|7|** are located in a practical and functional area in the rear of the compactor.

They run parallel with the carrier hoses, which protects them from accidental breakage, especially in deep narrow pipe trenches.

The motor **|8|**, with its special high-pressure seals, can withstand backpressure without the need for a drain line.

Full 360° hydraulic rotation **|9|** optimizes the position of the vibratory plate under any working conditions, moving more material faster.

Technical Data	IHC 50	IHC 70	IHC 75
Type of carrier	13	13	13
Excavator weight	3800 ÷ 17600 lbs	7700 ÷ 28600 lbs	8800 ÷ 30800 lbs

Accessories

1 | Indeconnect system

New remote monitoring system, based on the principles of the Internet of Things, to prevent equipment obsolescence and keep high performance. The **‘Indeconnect’** system consists of a **device** equipped with 4G technology for a wireless connection to the network, to be mounted on the equipment, and a cloud-based **web platform** you can access from mobile devices (with an app) or from PC, that lets you view the data transmitted in real time by each installed device: working hours, working position in space, hydraulic oil temperature, ambient temperature, GPS position, and more.

Through Indeconnect you can:

- **Monitor productivity**, making sure each Indeco tool is working as intended
- **Check operations**, verifying in real time the various internal and external parameters of the equipment to make sure that it is used in optimal conditions and correctly
- **Increase security**, by remotely checking the position of the equipment through GPS
- **Plan maintenance**, monitoring the health of each Indeco tool in real time, also through the automatic alert and messaging system that lets you order spare parts and reduce machine downtime to a minimum
- **Optimise rental**, by supervising and monitoring the management of rented equipment.

2 | Backfill blade

A useful option, mounted on the compactor, for smoothing and levelling the earth to be compacted, without needing to switch from compactor to bucket.
